DENTBOOSTER™

Innovative Tooth Desensitizing Gel for At-Home Dental Care

Solution for Tooth sensitivity

From thin enamel, receding gums, and worn tooth necks.

After scaling and dental procedures.

After whitening treatment.

Early-stage dental caries

Dentbooster is an advanced at-home dental gel designed to relieve tooth sensitivity at its source. Formulated with amorphous calcium phosphate nanoparticles (ACPnPs), it seals over 98% of exposed dentinal tubules from the first overnight application—quickly reducing pain by blocking fluid movement. Its biomimetic formula also supports natural remineralization, helping strengthen enamel and restore tooth structure over time.

How to use

INTENSIVE

3 
Daily use

Reduce Sensitivity
Boost Strength

MAINTENANCE

1 
Once a week

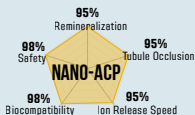

Remineralize Daily
Smile Freely

Olikap™

ACP Nanoemulsion Technology

-  Releases calcium and phosphate ions that rapidly integrate with the tooth's mineral structure, promoting fast biomimetic remineralization.
-  Creates a natural enamel-like protective layer that effectively reduces tooth sensitivity.

Reduced Tooth Sensitivity After One Application

% Occlusion

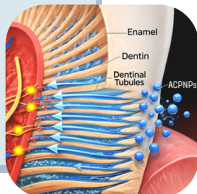

98.36 %

After Treated by the Dentbooster gel overnight

% Occlusion

85.99 %

After exposed to acidic drink (pH 2.5) for 10 cycles
